

Sub-Tropical Storm Ana

Eastern North Carolina

Threat Assessment

National Weather Service
Newport/Morehead City, NC

Date/Time Created: 5 am 05/08/15

**Tropical Storm Watch in effect for Carteret and
Onslow counties and coastal waters south of
Cape Lookout**

Sub-Tropical Storm Ana Advisory #2

Advisory Time: 05 AM EDT 8 May

Position: 31.6N 77.8W or 160 miles
SSE of Myrtle Beach SC

Intensity: 45 MPH (Tropical Storm)

Movement: North-northwest at 1 MPH

Minimum Pressure: 1004 MB (29.65 inches)

Overview: Subtropical Storm Ana will slowly drift northwest towards the South Carolina coast over the next few days, then turn northeast and track across eastern North Carolina as a Subtropical Depression early next week.

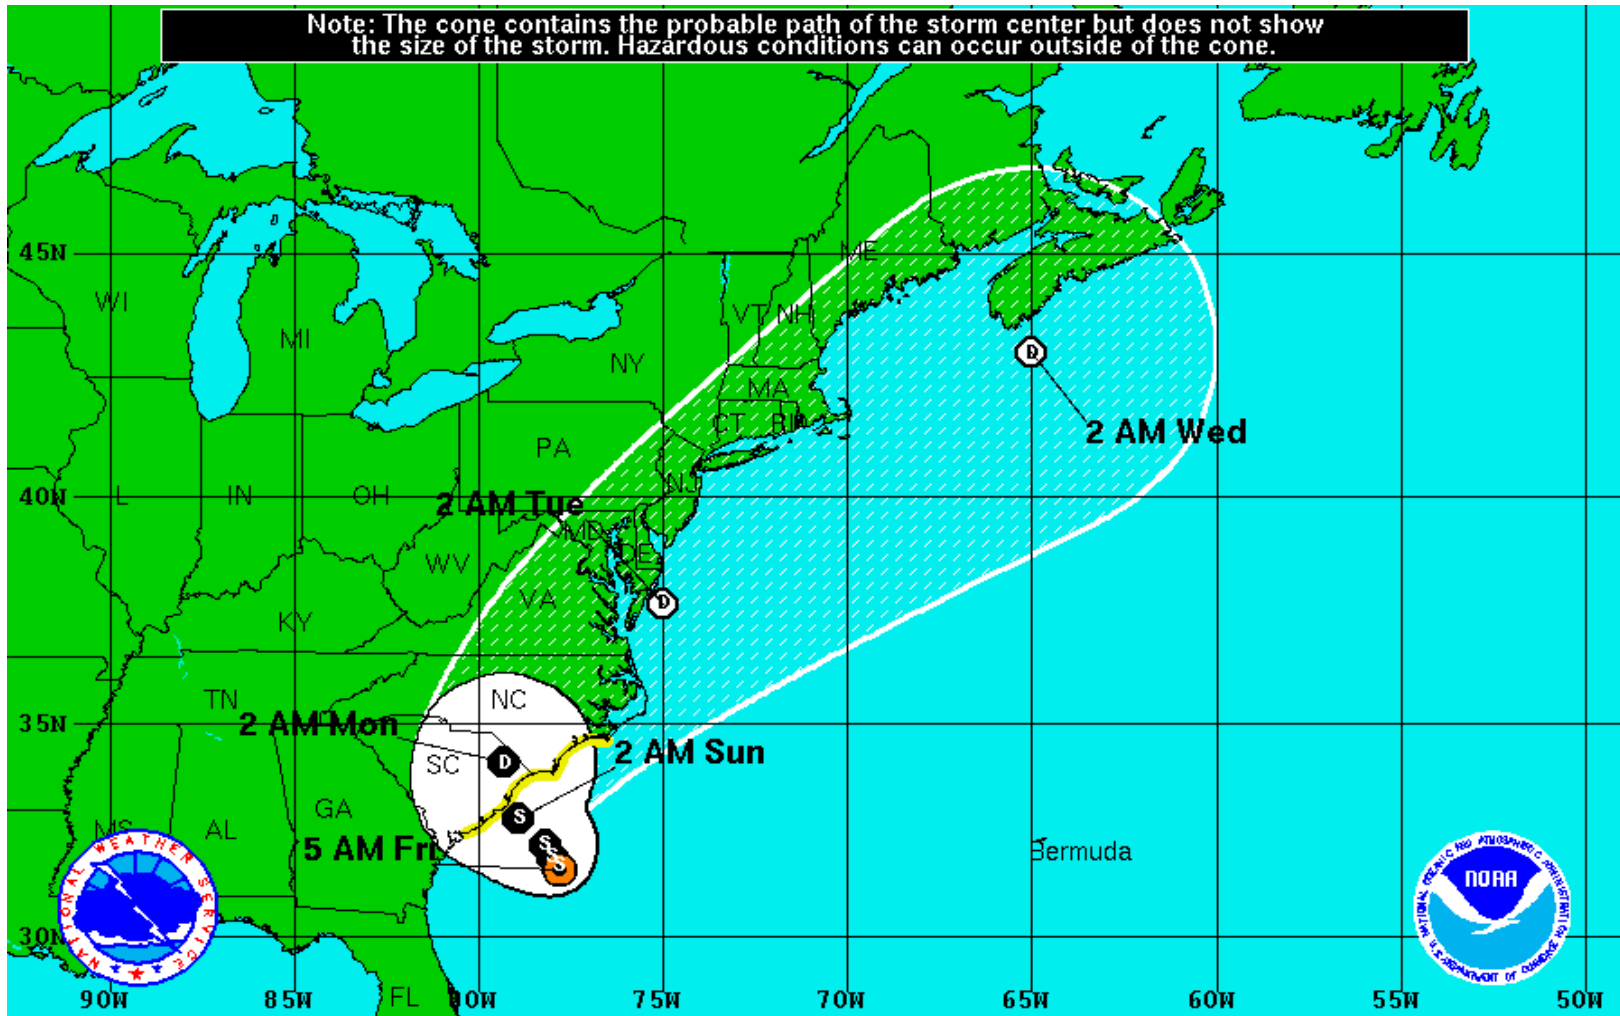

Impacts: The main impacts from Ana continue to look like periods of heavy rainfall, gusty winds along the coast, rough surf south of Cape Hatteras and a high risk of dangerous rip currents today through the weekend.

- **Tropical storm conditions** are possible south of Cape Lookout over the weekend.
- A **High Surf Advisory** remains in effect from Cape Hatteras to Cape Lookout for rough surf with minor beach erosion possible.
- A **Beach Hazards Statement** is in effect north of Cape Hatteras for a High Threat of rip currents
- An isolated strong to severe thunderstorm with gusty winds or an isolated tornado will be possible Saturday through Sunday night, with the best chances across the southern coastal areas. An isolated severe threat may continue into Monday as well.
- Additional impacts could be felt across the region if the track and/or strength of ANA changes.

Marine Impacts: Seas will build as high as 7 to 10 feet, highest south of Cape Hatteras, with Small Craft Conditions continuing through the weekend.

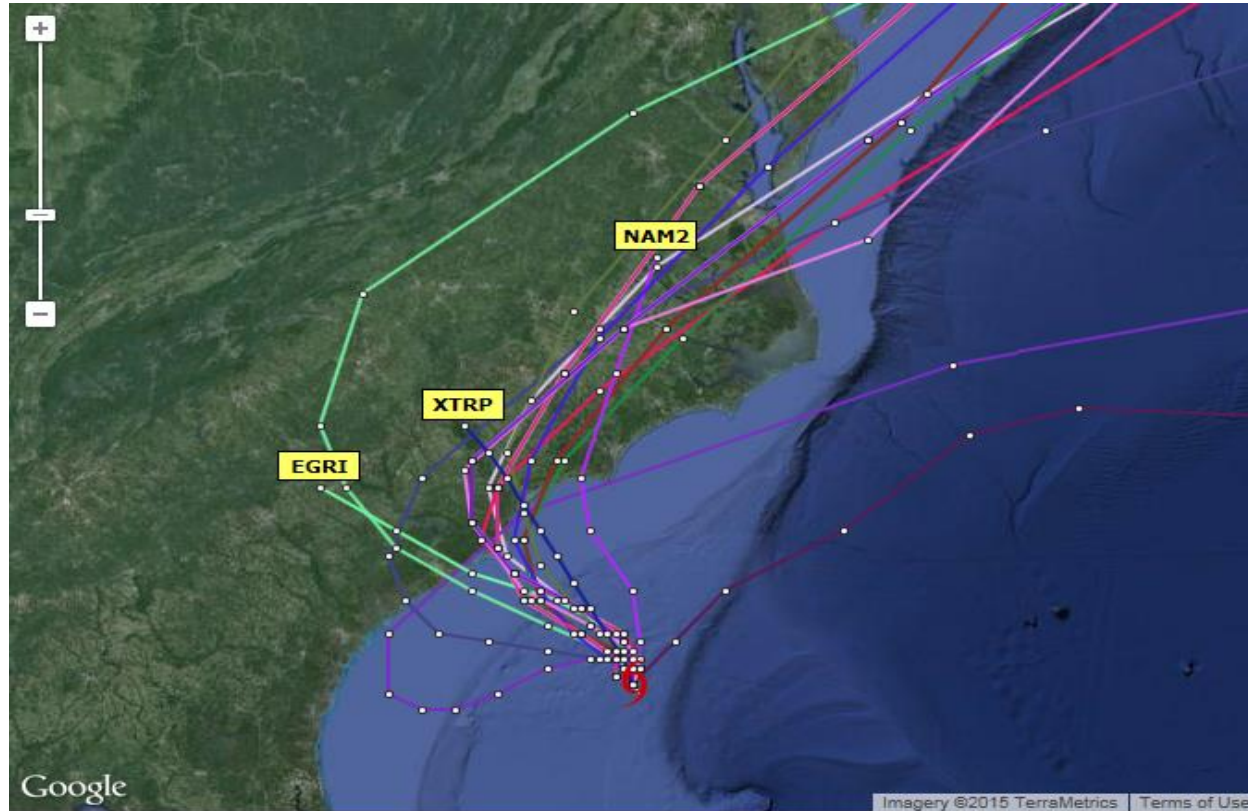

Recommendations: Closely monitor the progression and evolution of this system, especially for those agencies with outdoor activities scheduled this weekend.
